Last Updated Wednesday, 14 February 2007

Our mission is to grant impartiality of judgment and transparency in analyzing, cataloguing, and valuating master pieces and collections with a genuinely scientific approach in our historical, qualitative and quantitative analysis.

The service of Art Consulting is performed by a team of experts and researchers both historians of Art and physicists.

To the in-depth analysis of the style of paintings, sculptures and graphical art crafts a deep archeometric investigation is performed with the help of non invasive analysis techniques such as Infrared Reflectography (IRR), UV fluorescence, Optical Microscopy, or IR Spectrometry.

By a perfect synergy between investigation methods belonging to History of Art and Physics we are able to grant the best achievable advise on the origin, attribution and value of the art piece under investigation.

Syncretism and a cross-disciplinary approach at the roots of the services offered by IPSE DIXIT.
